

## **G2E Fosters a Gaming Community**

### **DigiDeal**

DigiDeal displayed their latest DTS tables, which recently underwent GLI approval. Dave Krise, VP of marketing, explained, "Right now, with our DCS system, we have 300 games worldwide, which is the original digital table with live chips, but DTS is our new system, where you can play with live or digital chips. They can hook into a central server and are in the process of being approved."

President and CEO, Mike Kuhn added: "We're one of the only companies that have the World Poker Tour using our games. The more sophisticated the game, the easier it is to play. The machine won't let you make mistakes. You can't overpay a hand, or pay a hand that didn't win. There isn't any player collusion." The system also offers the benefit of 750-800 dealt hands per hour. "We still have a dealer and a host, but we're increasing the production. In fact, we just received our license in Mexico, so we'll be submitting tables there," Kuhn said.
