- Last 15 Roll Outcomes
- Most Frequently Rolled Numbers Displayed

Let Player's roll the dice to choose which face down cards to reveal!

## Perfect for All California Card Crap Style Games!

### All Eyes are on Table DROID!

Table Droid brings real excitement to the game of Craps becoming the center of attention and anticipation for players! Two large 15" screens display real time animated outcomes, game outcome history and the most hit numbers in the last 20 outcomes. For the first time players can view a complete graphic history of the last fifteen outcomes along with individual card values and card suit information, plus current minimum and maximum bet limits and table odds that casino can easily edit.

Using the Table Droid to play California Craps gives back valuable layout space for more bets while maximizing game speed and security for the casino. No more shufflers to lease and no more cards to buy. The Droid units mount directly onto any existing craps table. A typical full size craps table will have two large player display screens and a small control screen at the stick man's position all simultaneously displaying the animated outcome sequence and game information. The Table Droid is pre-loaded with all the current California play methods for the casino to select from.

### Easy to Operate!

The Table Droid is fully interactive through it's easy to use touch control screen, requiring no keyboard, mouse or external buttons. The initiation of an outcome sequence can be controlled by the stick man or be fully automated through the use of built-in timers. After an outcome is displayed and all bets are resolved and a simple touch to the control screen begins a new animated outcome sequence. This sequence consists of an animated representation of a shuffle and the random distribution of the digital dice cards face down or spinning.

Droid offers two types of play out modes: "Auto Random Select" and "Player Assist Select". In auto random select mode cards are shuffled and randomly distributed, then automatically selected and displayed (by the stick man or timers). In player assist select mode the randomly distributed cards remain face down or spinning, awaiting selection by the operator based on player supplied information. Player's can roll two differently colored dice to determine which face

down cards to reveal or they can simply tell the operator when to stop the spinning of a card or select a face down card. The player assist select" mode allows the player to be more involved with the game outcome process. For security, a password is required for access to all menu functions. The operator has access to set-up menus and the selection of game play methods, card deck color as well as the editing of minimum, maximum bet limits, table odds and the viewing of game logs.

Use the Table Droid with any table game... like Dominos, Roulette or Craps!

Table DROID... a better way to play!
